

Marcin Kleszcz

Robotics Software Engineer

PROFESSIONAL EXPERIENCE

Robotics Software Engineer (Oct 2023 – Nov 2025)

Meili Robots | Copenhagen

- Designed and built from scratch the core fleet orchestration microservice - covering multi-robot coordination, time-optimal pathfinding, dynamic replanning, and collision management.
- Developed and deployed ROS 2 software running on-robot (e.g. MiR, Youibot) to bridge onboard systems with the fleet management backend.
- Backend development using Python and Django, worked across OPC UA, MQTT, WebSocket, REST API, PostgreSQL, and Docker.
- Held regular calls with customer teams to support deployment, debug integration issues, and walk through system features.

Embedded Software Developer (Sep 2022 – Aug 2023)

Nordic Semiconductor | Krakow

- Developed and tested firmware in C for SoCs and Power Management ICs, contributing across the full product development cycle.
- Added nRF54L series to the Zephyr RTOS tree - device tree definitions, Kconfig, and HAL bindings.
- Wrote automated tests, working closely with hardware and testing teams.

Embedded Software Developer Intern (May 2022 – Aug 2022)

Nordic Semiconductor | Krakow

- Built a [repository](#) of sample applications demonstrating nrfx driver usage within Zephyr RTOS.
- Tested SoCs compatibility with the Matter protocol using automated and manual methods, documenting and reporting any chip failures.

Robotics Instructor (summer 2021)

Planeta Robotow ("Planet of Robots") | Bielsko-Biala

- Conducted summer day camp classes, teaching children aged 7 to 14 the basic concepts of robotics and computer science using Lego Mindstorms and the educational version of the Minecraft game.

EDUCATION

Technical University of Denmark (2023 – 2025)

Master of Science in Engineering: Autonomous Systems
Kongens Lyngby, Denmark

Activities: SDU Robotics Summer School (Odense, 2024), Novo Nordisk RoboTech Challenge (3rd place), Thesis at NRT Lab, Hackathons

Swiss Federal Institute of Technology Lausanne (Fall 2024)

Exchange Semester: Robotics
Lausanne, Switzerland

AGH University of Science and Technology (2019 – 2023)

Bachelor of Engineering: Automatics and Robotics
Krakow, Poland

Activities: AGH Racing (Deputy PM of Powertrain Electric Dept.), KN Integra (Robotics University Club), Hackathons

Awards: AGH Scholarship for top students (2020), Diamond Index Olympiad - laureate in physics

OVERVIEW

Robotics Software Engineer with experience in fleet management, ROS 2, motion planning and embedded systems. Comfortable working across the full robotics stack – from firmware to fleet orchestration.

SKILLS

Robotics & Automation

ROS 2 | Motion Planning
ML / DL (PyTorch) | OpenCV
Sensor Integration

Programming Languages

Python | C++ (17) | Embedded C
MATLAB / Simulink

Frameworks & Tools

Simulations (Gazebo, Isaac Sim)
Git | RTOS (Zephyr)

Systems & Integration

Linux | CI / CD | Docker

Engineering & Design

Autodesk Inventor | 3D Printing
PLC | Electronics Basics

Languages

English | Polish

Projects
